
Vision in Human and Machine

Part 5

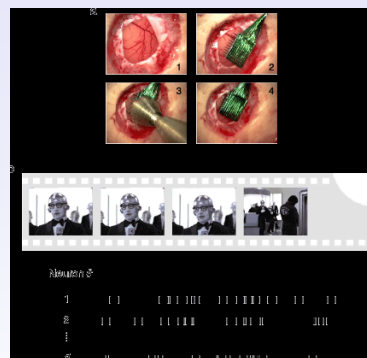

Principles of Object Representation in the Brain

Heiko Wersing
Honda Research Institute Europe GmbH

Object Representation in the Brain 1

Experimental techniques

- Invasive
 - Lesion studies
 - Single-cell recording
 - Multi-electrode arrays
 - Optical imaging

Object Representation in the Brain 2

Experimental techniques

- Non-invasive

- Computer tomography (CT)
 - Density computation based on several X-ray scan slices
- Positron emission tomography (PET)
 - Radioactive isotope is taken up after injection
 - Positron emissions are registered → Measure of local neural activity
- Functional magnetic resonance imagery (fMRI)
 - Spin polarization in strong magnetic field
 - Fine spatial resolution
 - Low temporal resolution

Object Representation in the Brain 3

Time course of visual object processing

Object Representation in the Brain 4

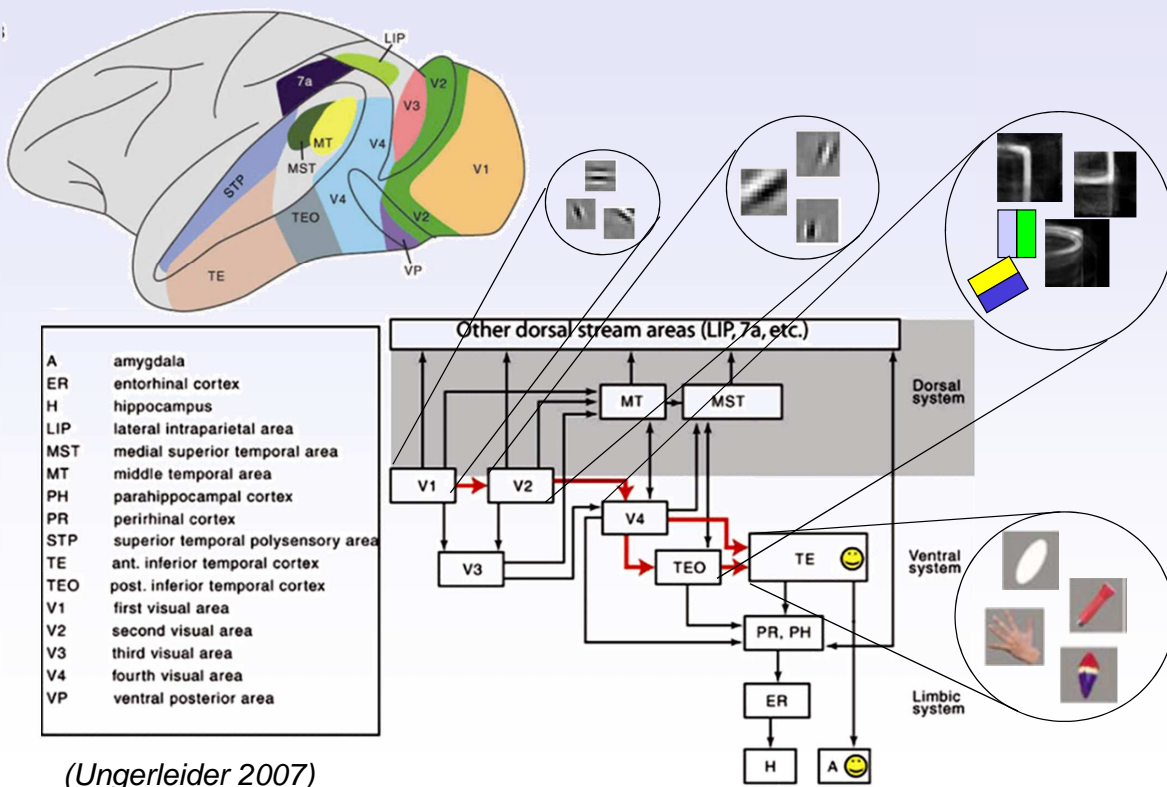

Properties of Human Object Perception

- Recognition is fast

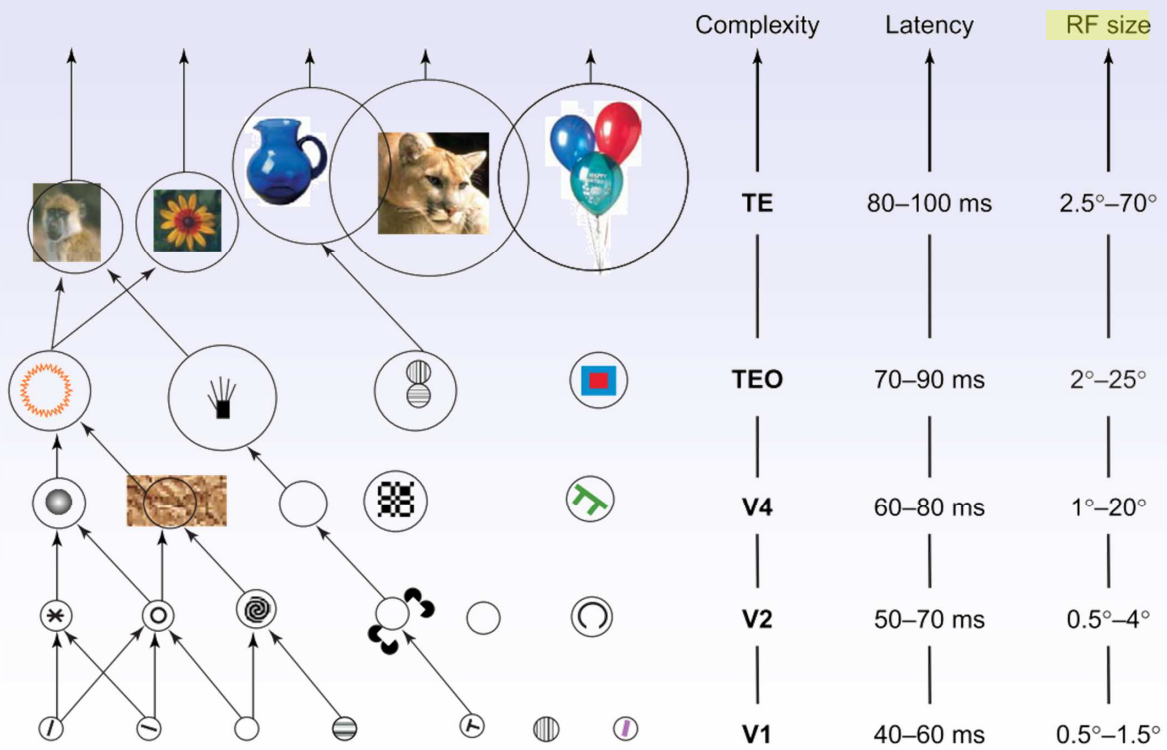

Object Representation in the Brain 5

Visual Areas in the Macaque Brain

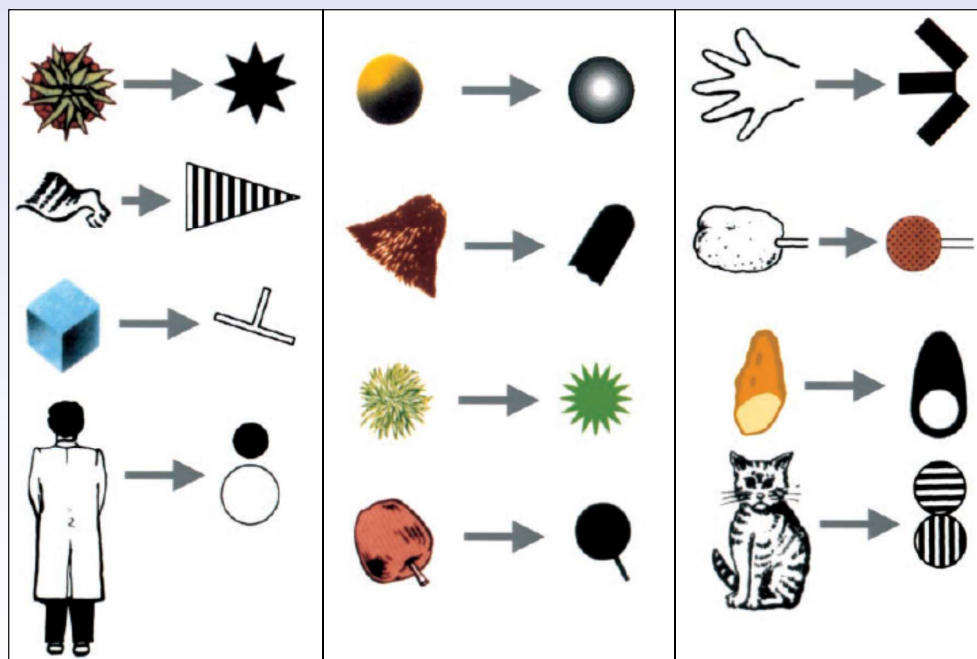

Object Representation in the Brain 6

Processing hierarchy in the ventral pathway

Object Representation in the Brain 7

Optimal Features in Area TE

Simplification procedure for optimal features (Tanaka 1990)

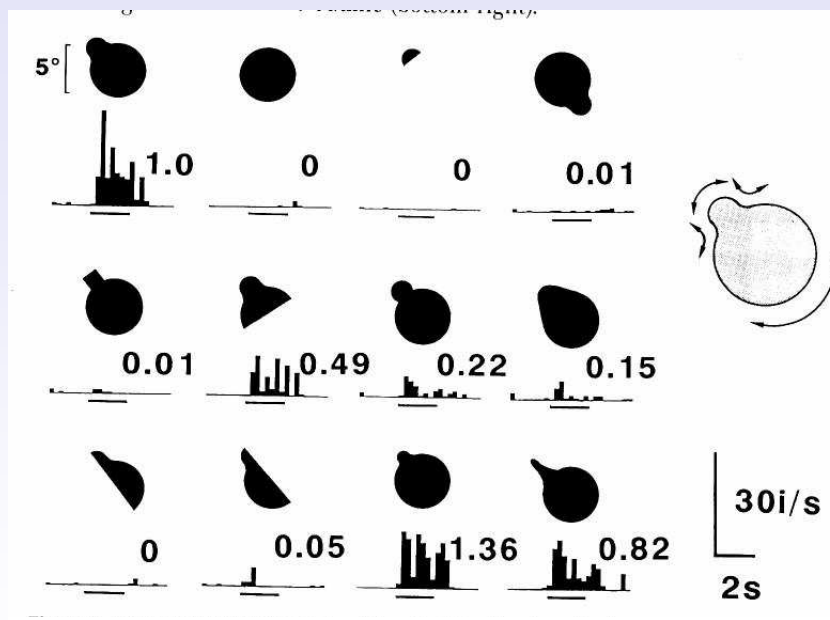

Object Representation in the Brain 8

Features in IT (and V4)

Response to simplified stimuli (Kobatake and Tanaka 1994)

Features in IT - Pattern Specificity

Features in IT - Orientation Selectivity

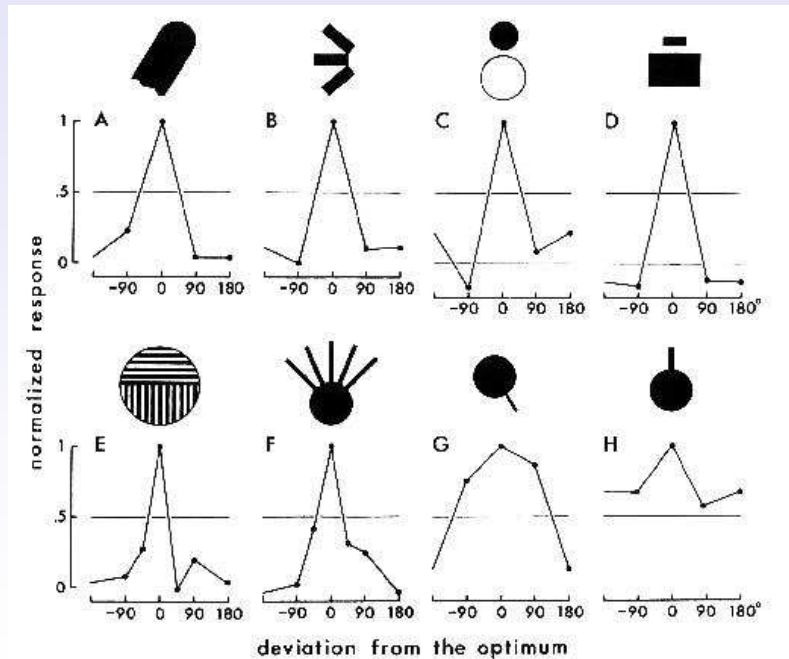

Figure 5. Tuning of responses of eight TE cells for the stimulus orientation.

Object Representation in the Brain 11

Features in IT - Size Tuning

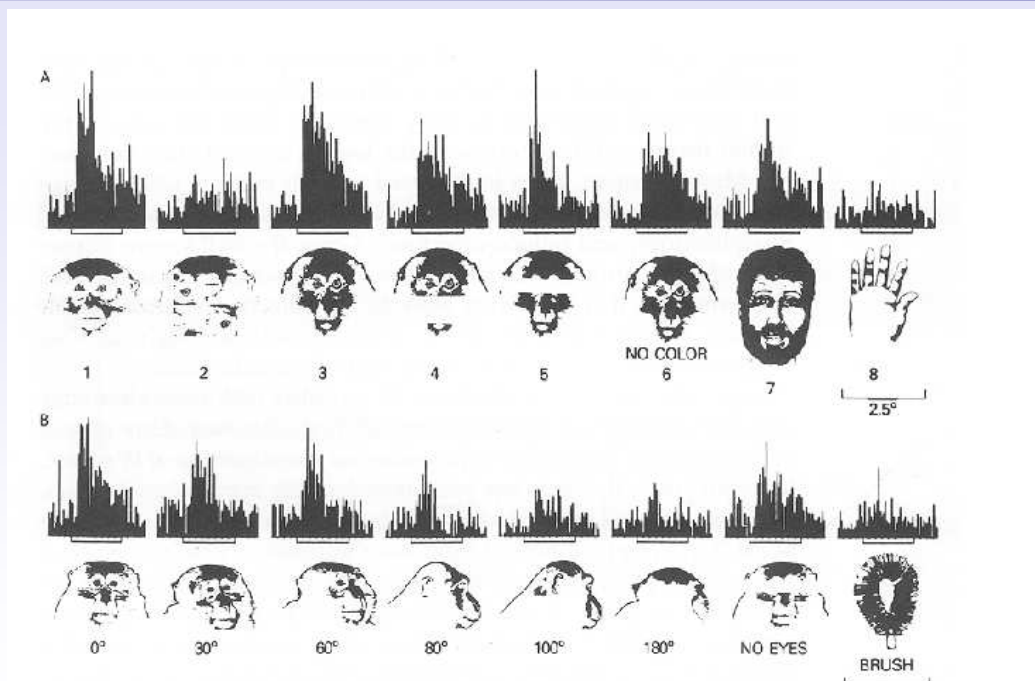

Figure 6. Tuning of responses of four TE cells for the stimulus size.

Object Representation in the Brain 12

Face cells

Object Representation in the Brain 13

Columnar Tuning in Area TE

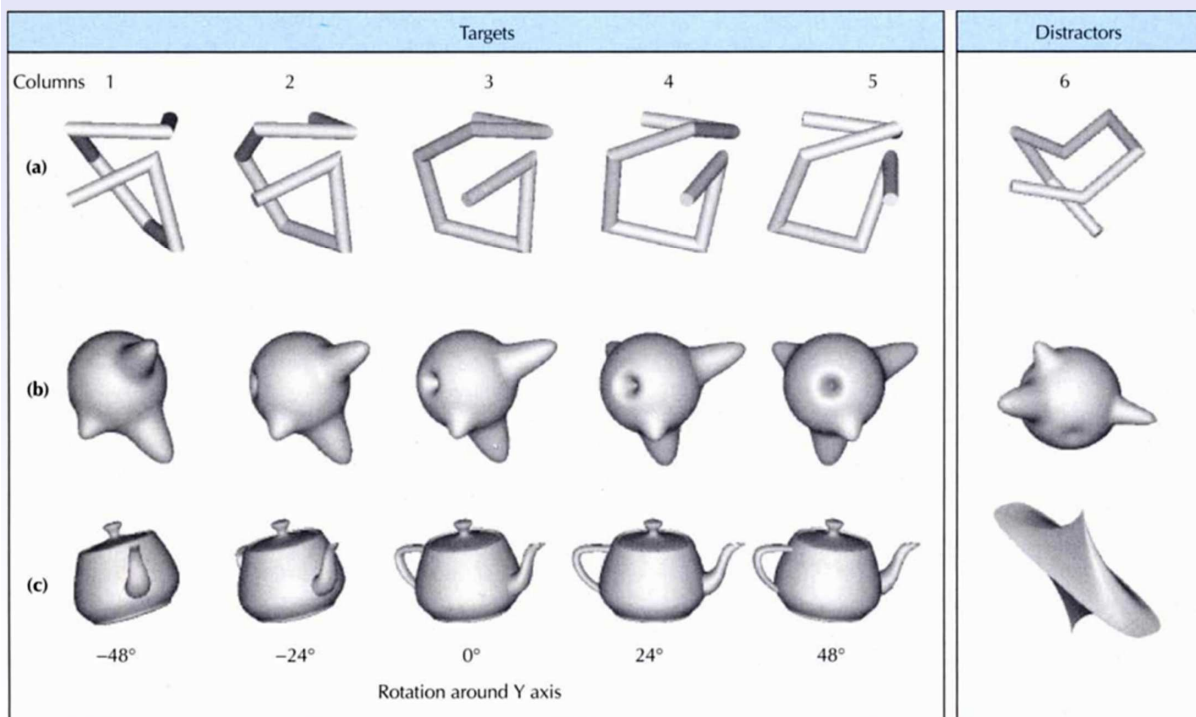

Wang, Tanaka, & Tanifuji (1996)

Object Representation in the Brain 14

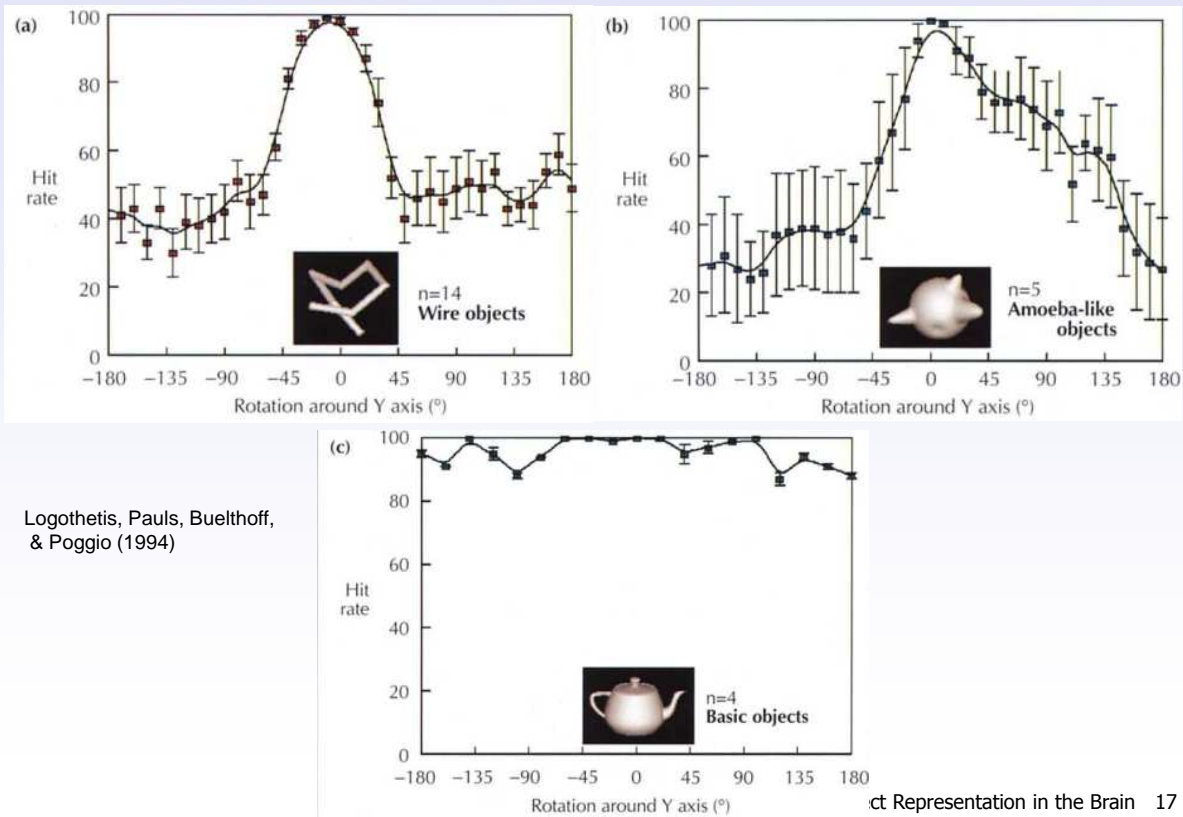

Psychophysical evidence for view-based object representation

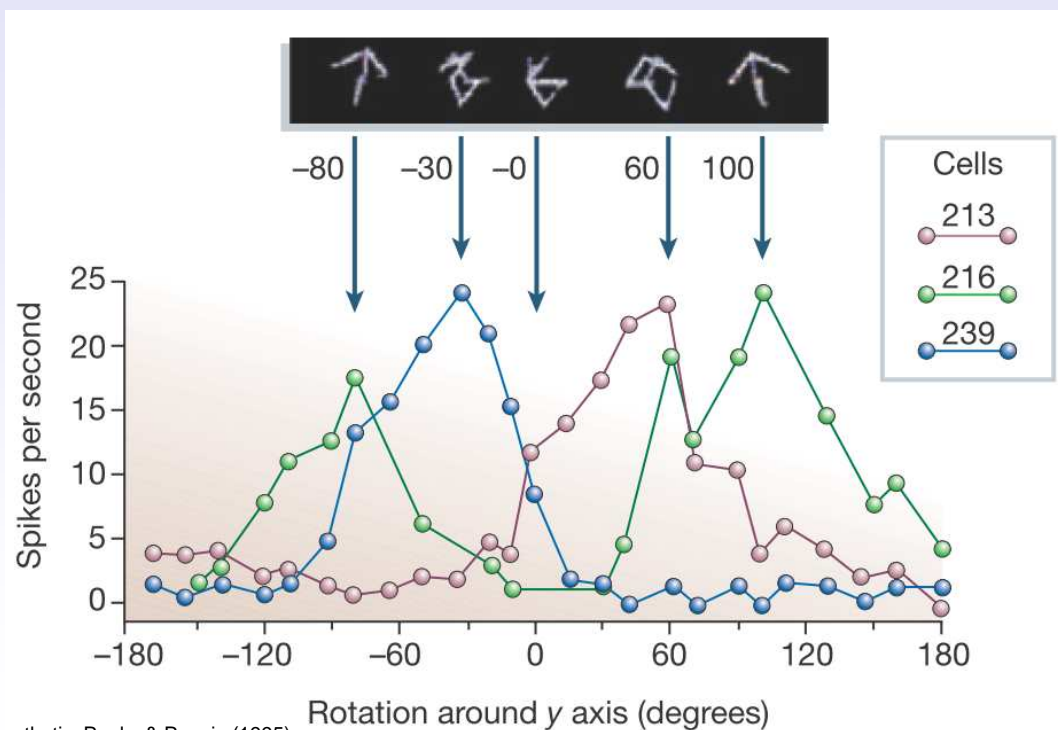

Logothetis, Pauls, Buelthoff, & Poggio (1994)

Psychophysical evidence for view-based object representation

ct Representation in the Brain 17

Responses of IT neurons

Logothetis, Pauls, & Poggio (1995)

Object Representation in the Brain 18

Generating an invariant representation

- Summation over view-tuned neurons

Object Representation in the Brain 19

Columnar representation

Complex objects are represented in macaque inferotemporal cortex by the combination of feature columns.

Tsunoda, Yamane, Nishizaki, and Tanifuji. Nature Neuroscience (2001)

Light absorption imaging technique

Object Representation in the Brain 20

Stimulus Examples

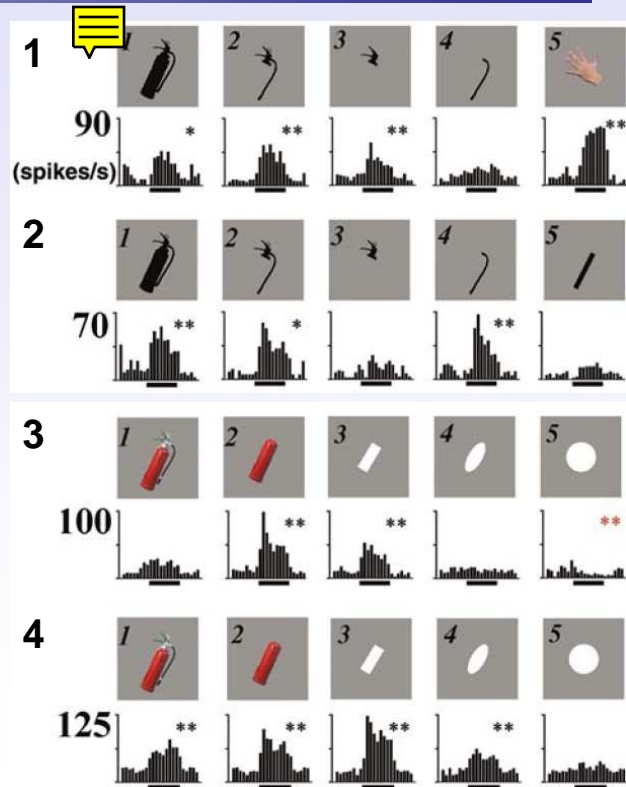

Object Representation in the Brain 21

Compositionality

Object Representation in the Brain 22

Feature Interactions

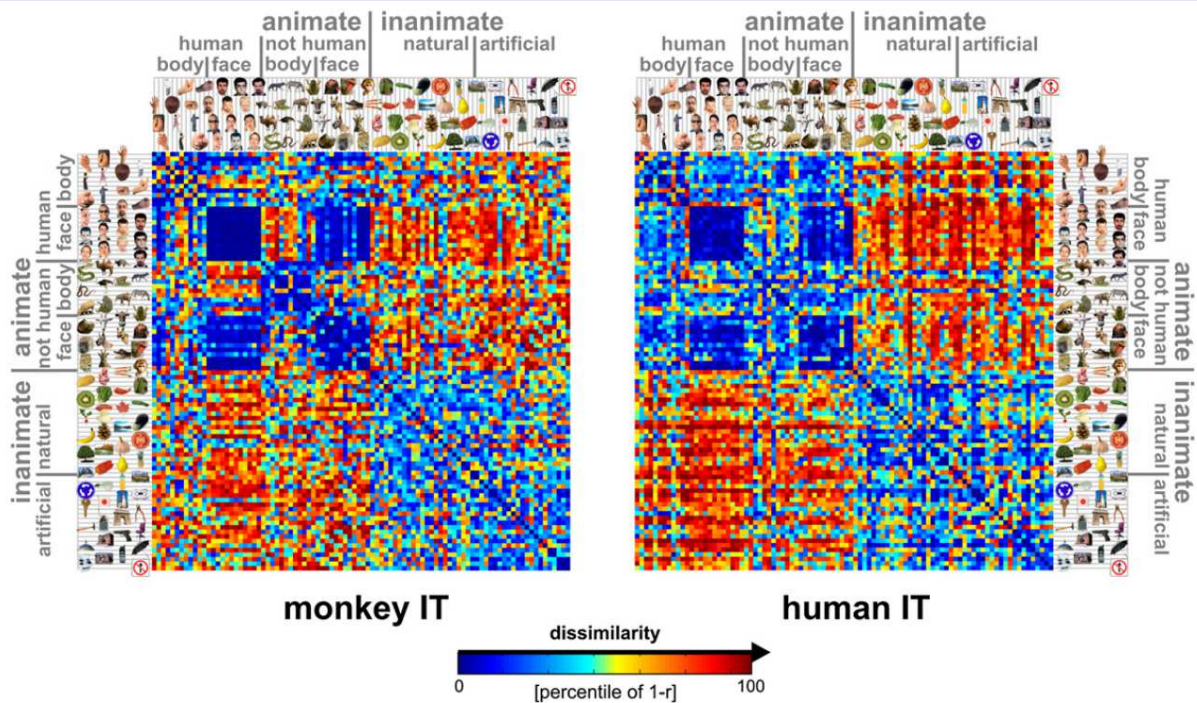

Object Representation in the Brain 23

Matching IT response between human and monkey

- Kriegeskorte, Mur, Ruff, Kiani, Bodurka, Esetky, Tanaka, & Bandettini. Neuron (2008)
 - 92 colorful stimulus images
 - Extracellular recording of 674 IT neurons in 2 macaque monkeys
 - High resolution fMRI within a 5cm thick slab of IT for 4 humans
voxels 2 x 2 x2 mm → Includes IT and early visual cortex
 - One of the few studies to systematically compare between human and monkey
 - Qualitative very different type of data
 - Interesting analogies were found

Similarity of monkey IT response and human IT fMRI

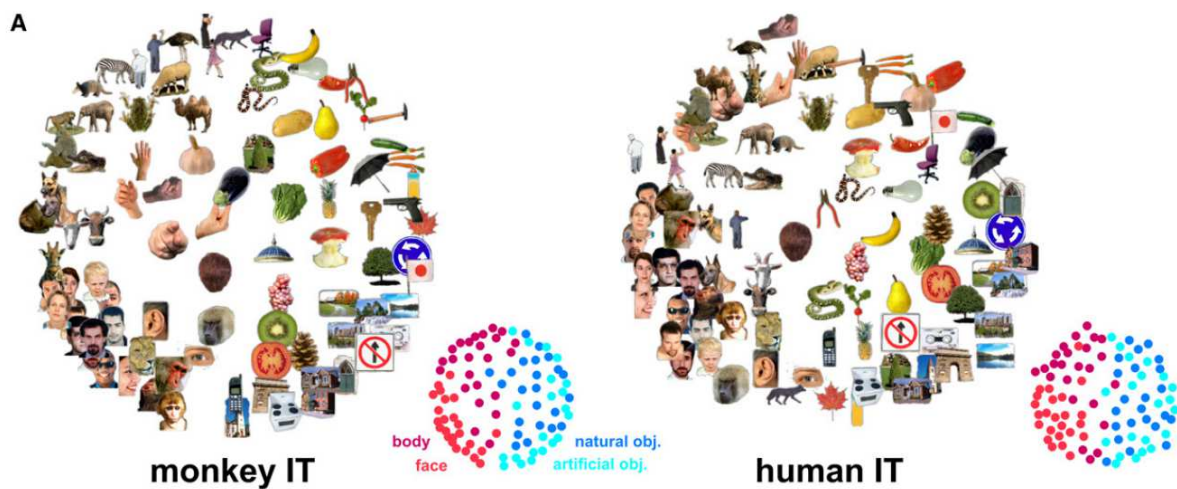

(Kriegeskorte et al. 2008)

Object Representation in the Brain 25

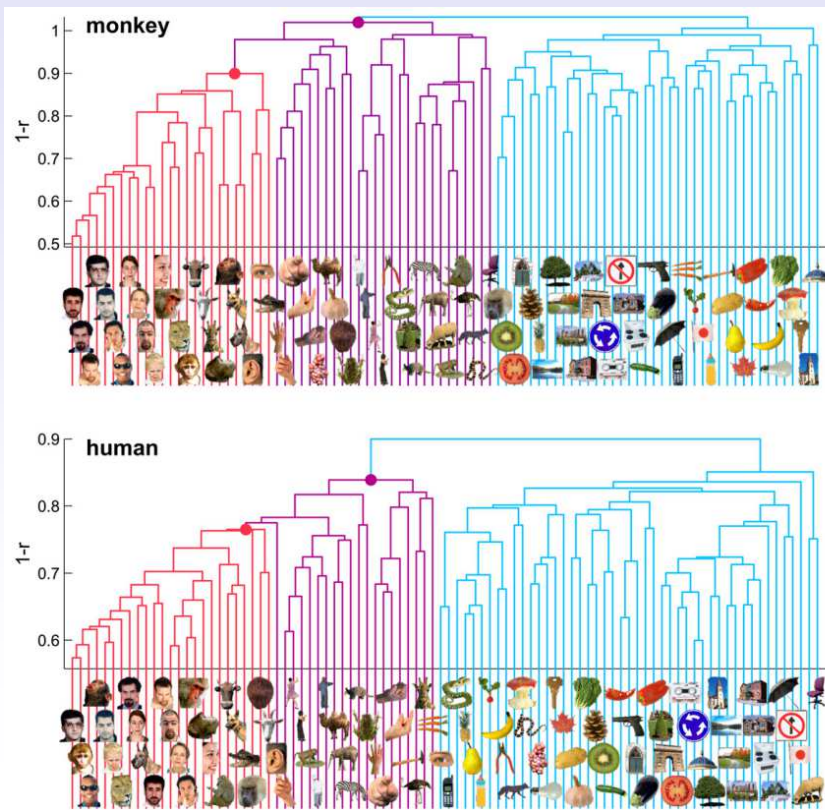

Multidimensional Scaling

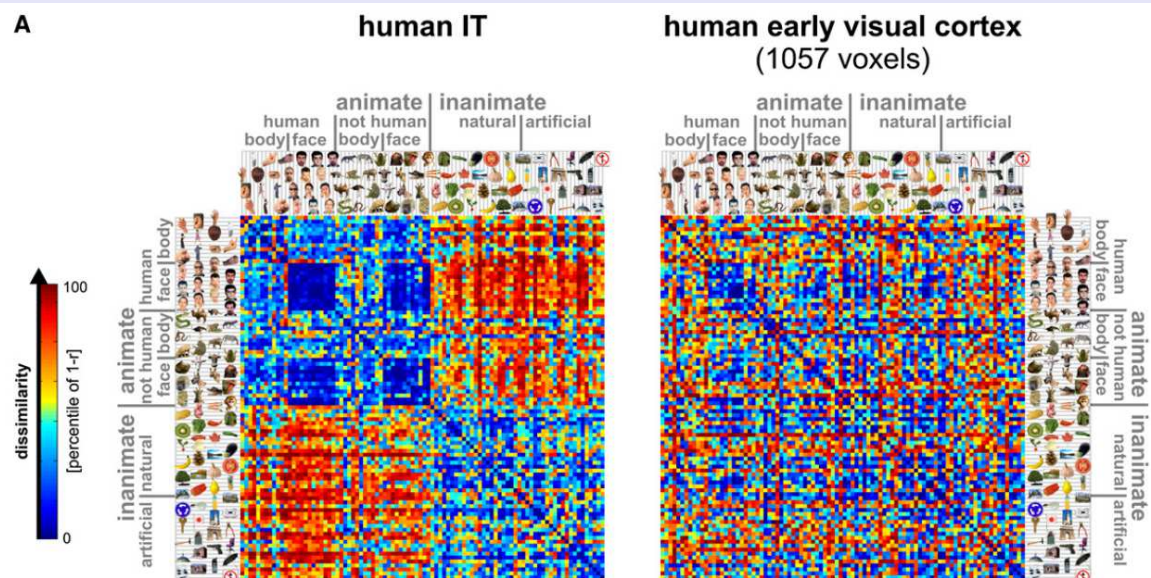

Object Representation in the Brain 26

Hierarchical Cluster Analysis

representation in the Brain 27

Comparison of IT and early visual cortex

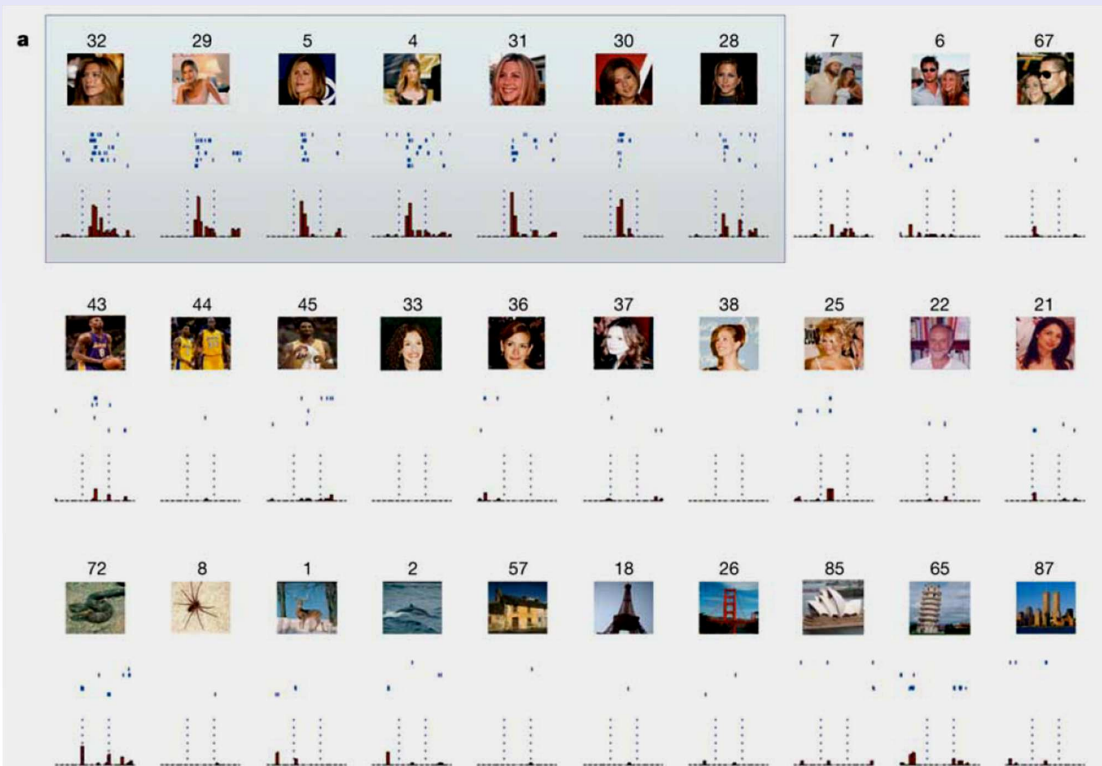

Grandmother cells revisited

- Quiroga, Reddy, Kreiman, Koch, & Fried
"Invariant visual representations by single neurons in the human brain". Nature (2005).
- Recording in the mediotemporal lobe of human epilepsy patients
- Systematic bootstrapping search procedure to identify invariant responses

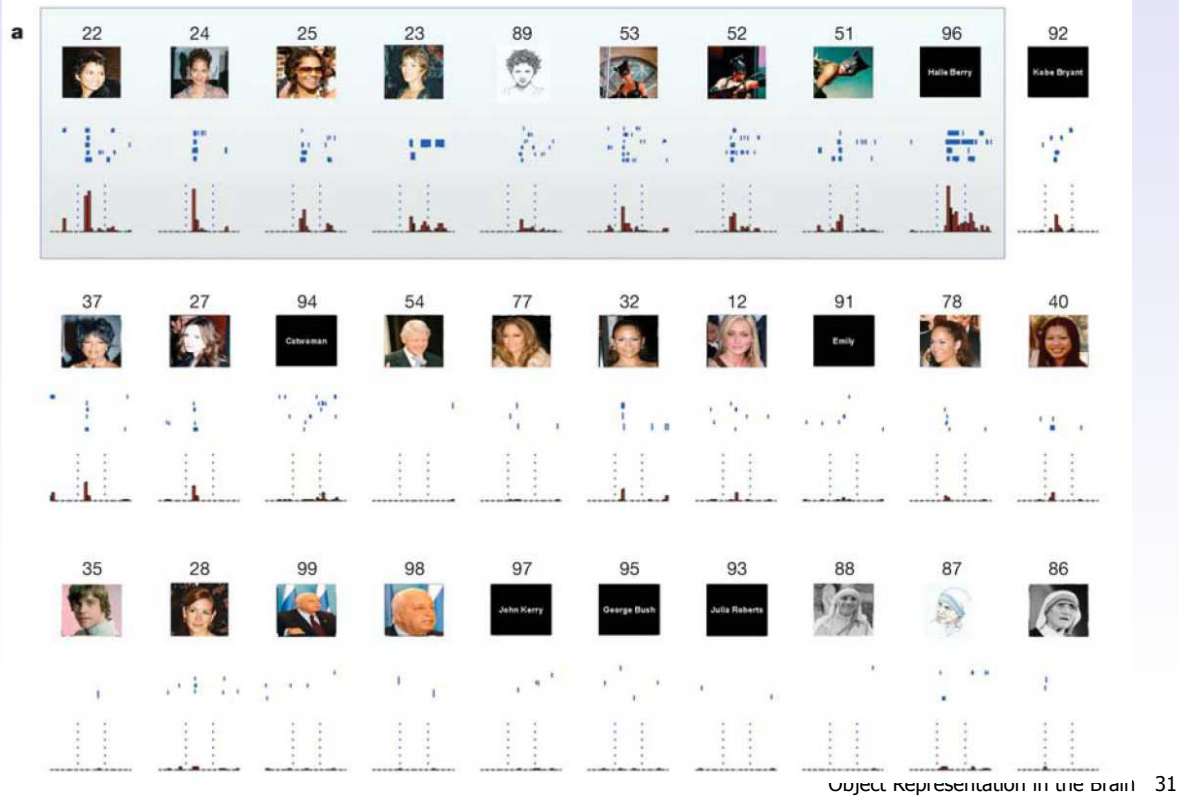

Object Representation in the Brain 29
